

# RWA Liquidity Hub

One core pool, many markets

Derived Pools

# Problem

- Traditional AMMs assume deep liquidity and high volatility
- RWAs have limited supply and require price stability
- Result: high slippage, price distortion, low participation
- Many markets legally enforce price limits or circuit bands
- RWA adoption is hard without enforceable on-chain limits

## Daily Price Limits

- China ( $\pm 10\%$ ,  
- Risk  $\pm 5\%$ , STAR  
-  $\pm 20\%$ )
- Korea ( $\pm 30\%$ )
- Japan (daily  
- limits by yen  
- bands)
- Taiwan (daily  
- limit system)

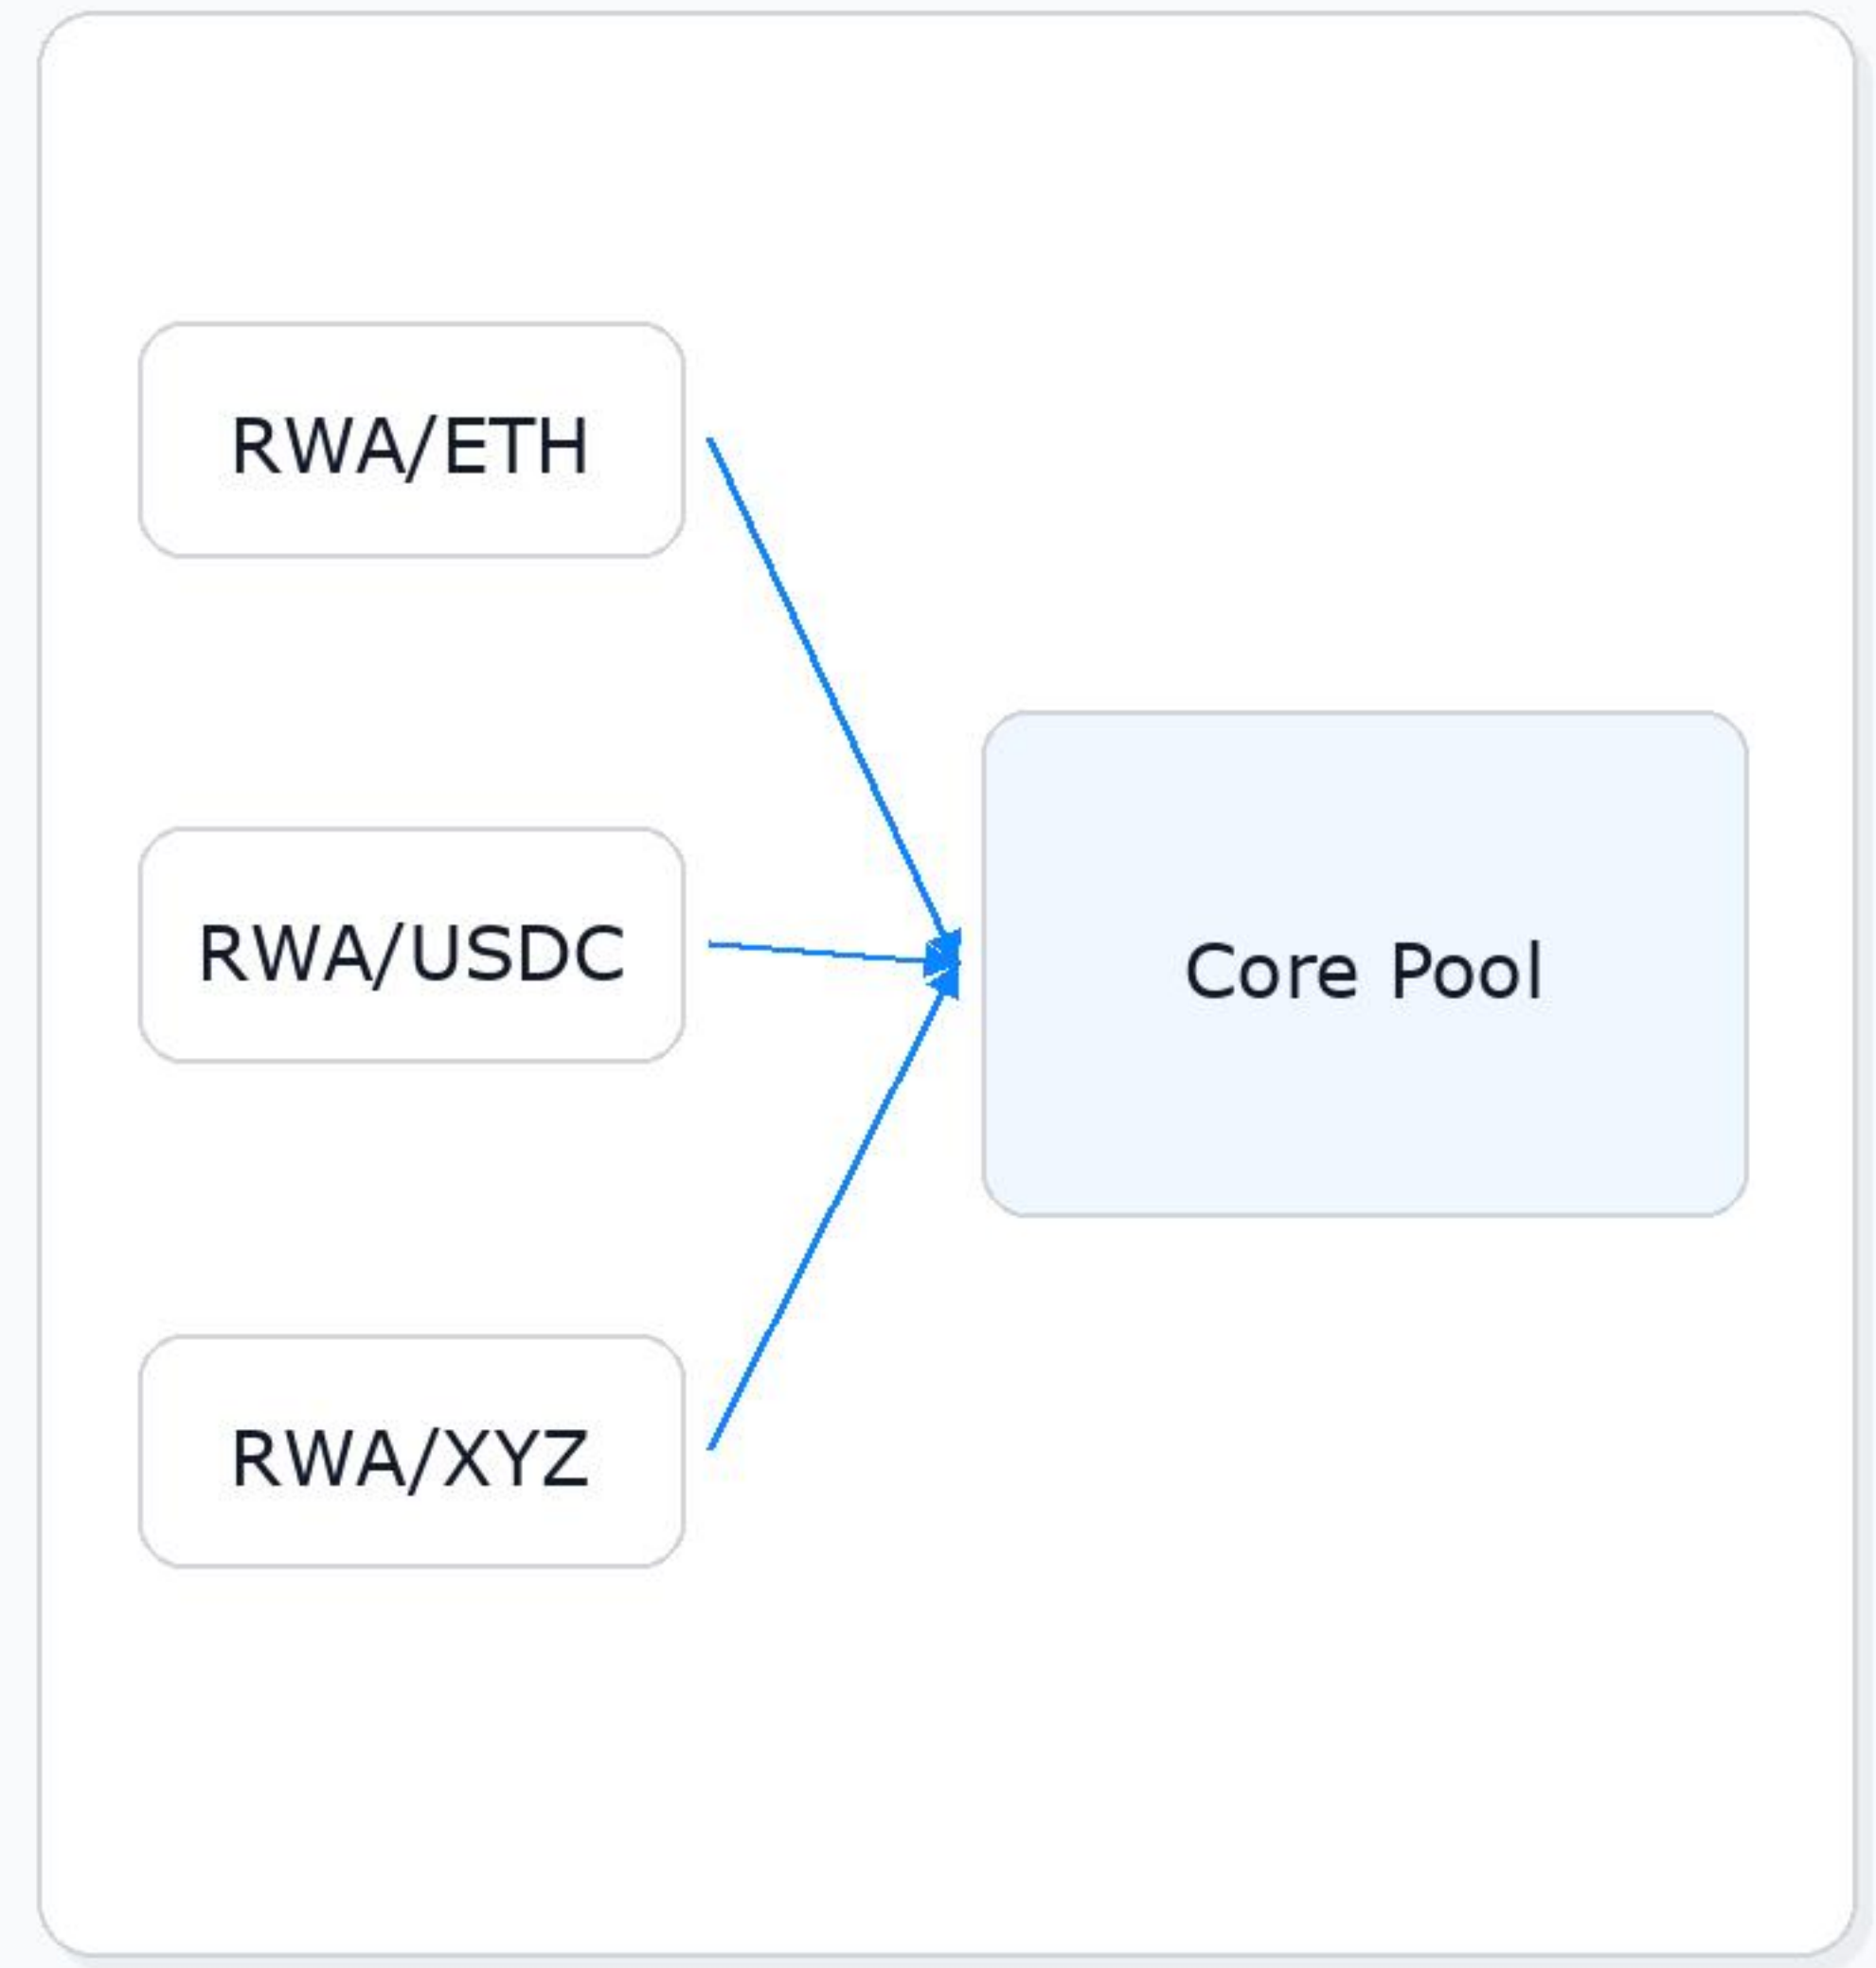

## Circuit Bands / Rules

- US (LULD Rule  
- 608)
- EU (MiFID II  
- trading halts)
- Hong Kong (VCM  
-  $\pm 10/15/20\%$  +  
- cooling)
- Singapore (price  
- bands +  
- cooling-off)

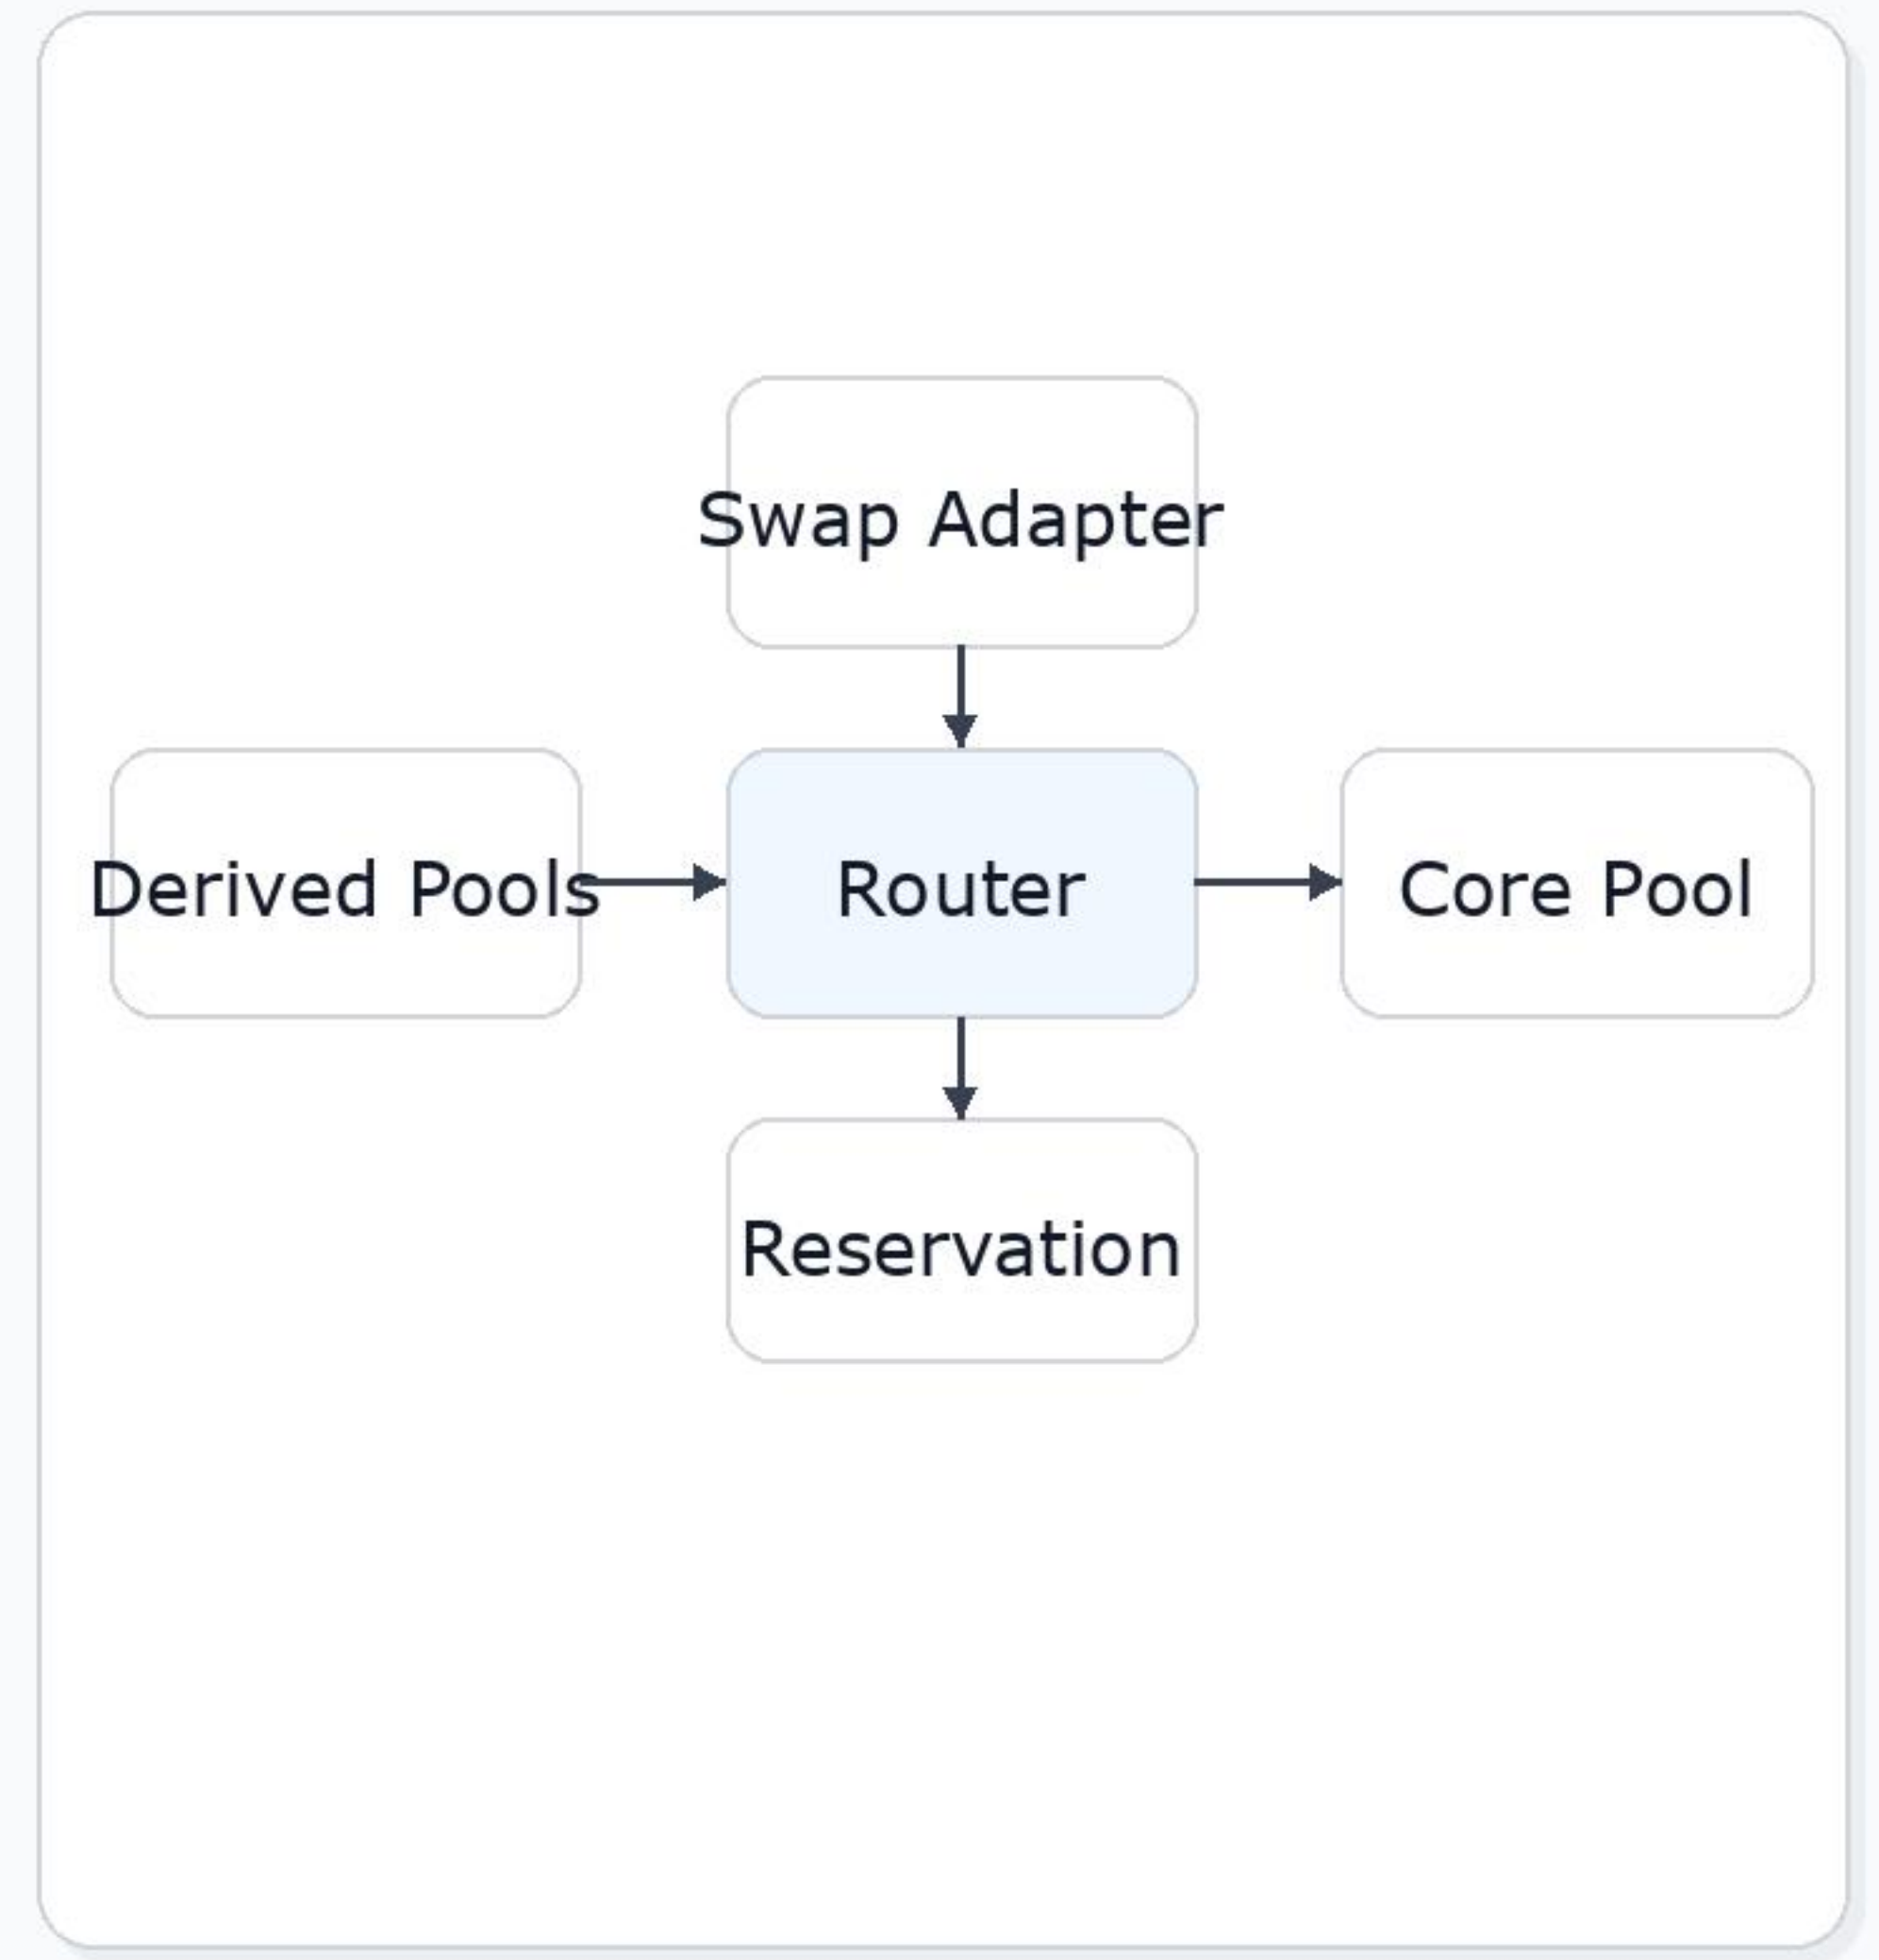

# Key Insight

- Do not create more pools
- Share one core RWA liquidity base across many routes
- Use virtual reserves to dampen sharp price moves
- Curve:  $(x+vRwa)*(y+vStable)=k$

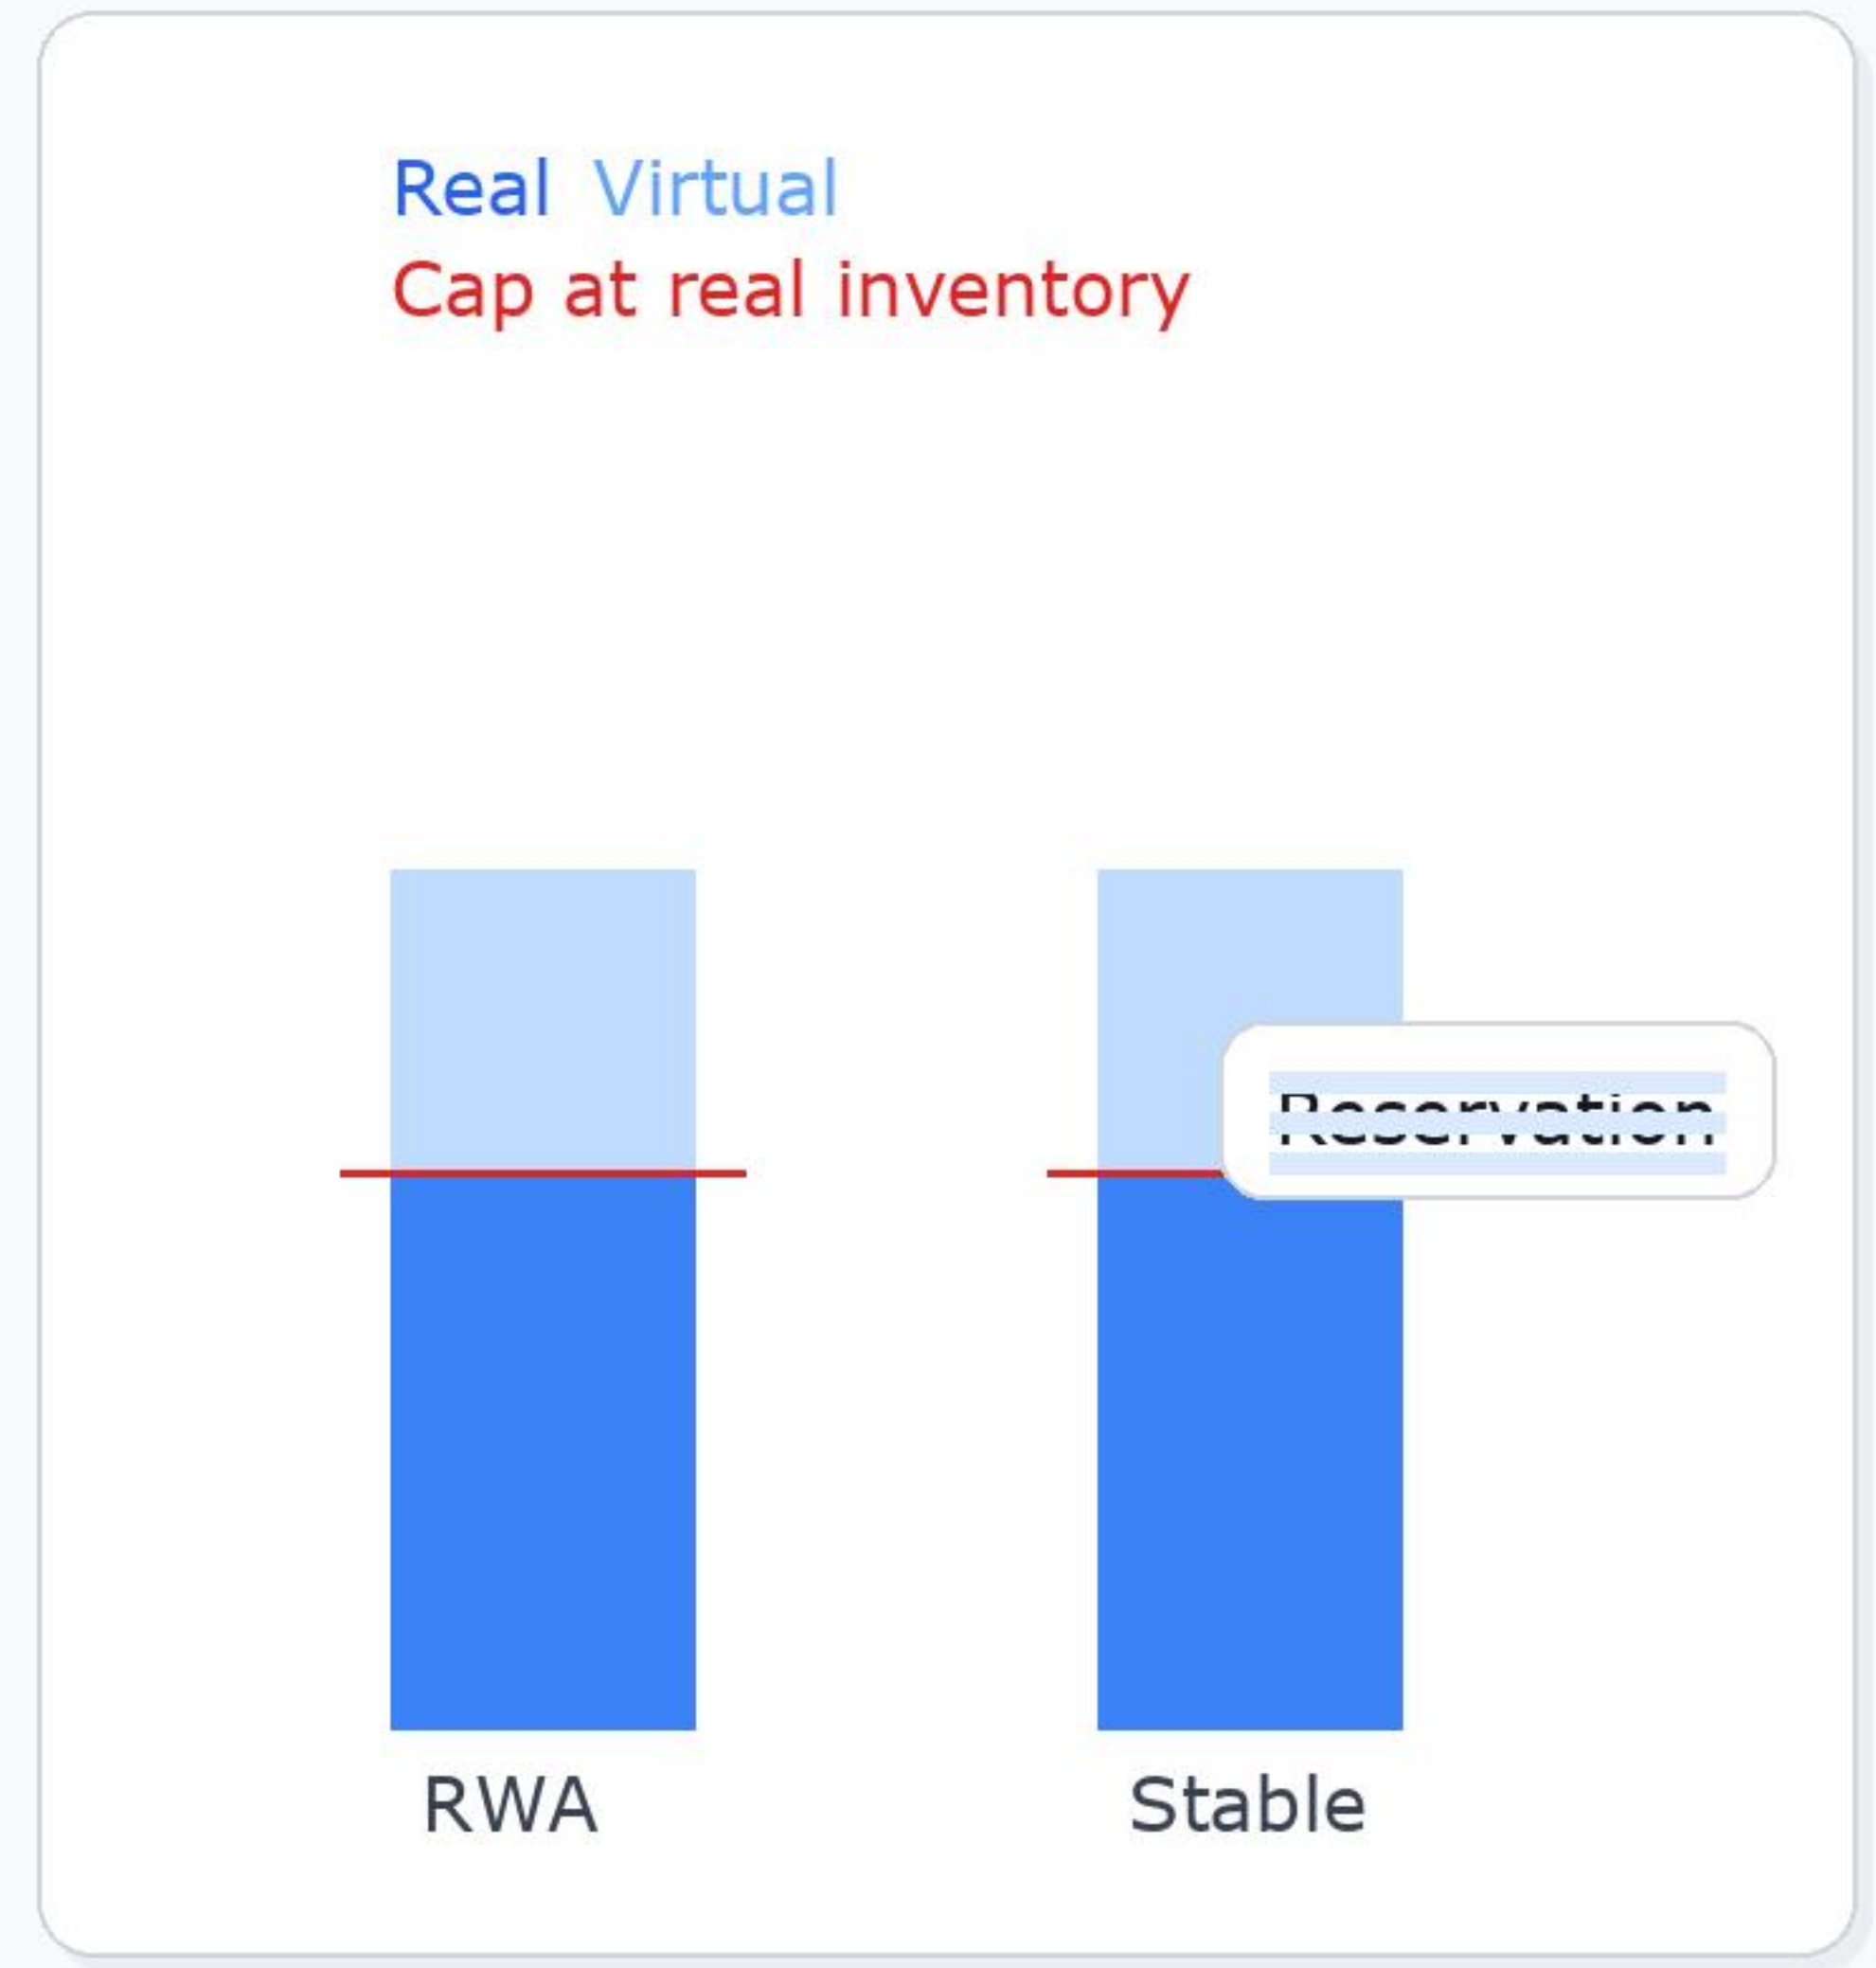

# Architecture

- Core Virtual Reserve Pool
- Derived Spot Pools
- Liquidity Hub Router
- Adapters connect base tokens to stable

# Pricing and Safety

- Oracle-free pricing via Virtual Reserves
- Real inventory cap on fills
- Overflow becomes Reservation (cancel or claim)
- No centralized market maker, lower manipulation risk

# Participation (Institutions)

- Provide initial liquidity
- Pricing uses virtual reserves:  
 $(x + vRwa) * (y + vStable) = k$
- Optionally set a price move limit (default +/- 30%)
- Manage adapters and queue operations (optional)

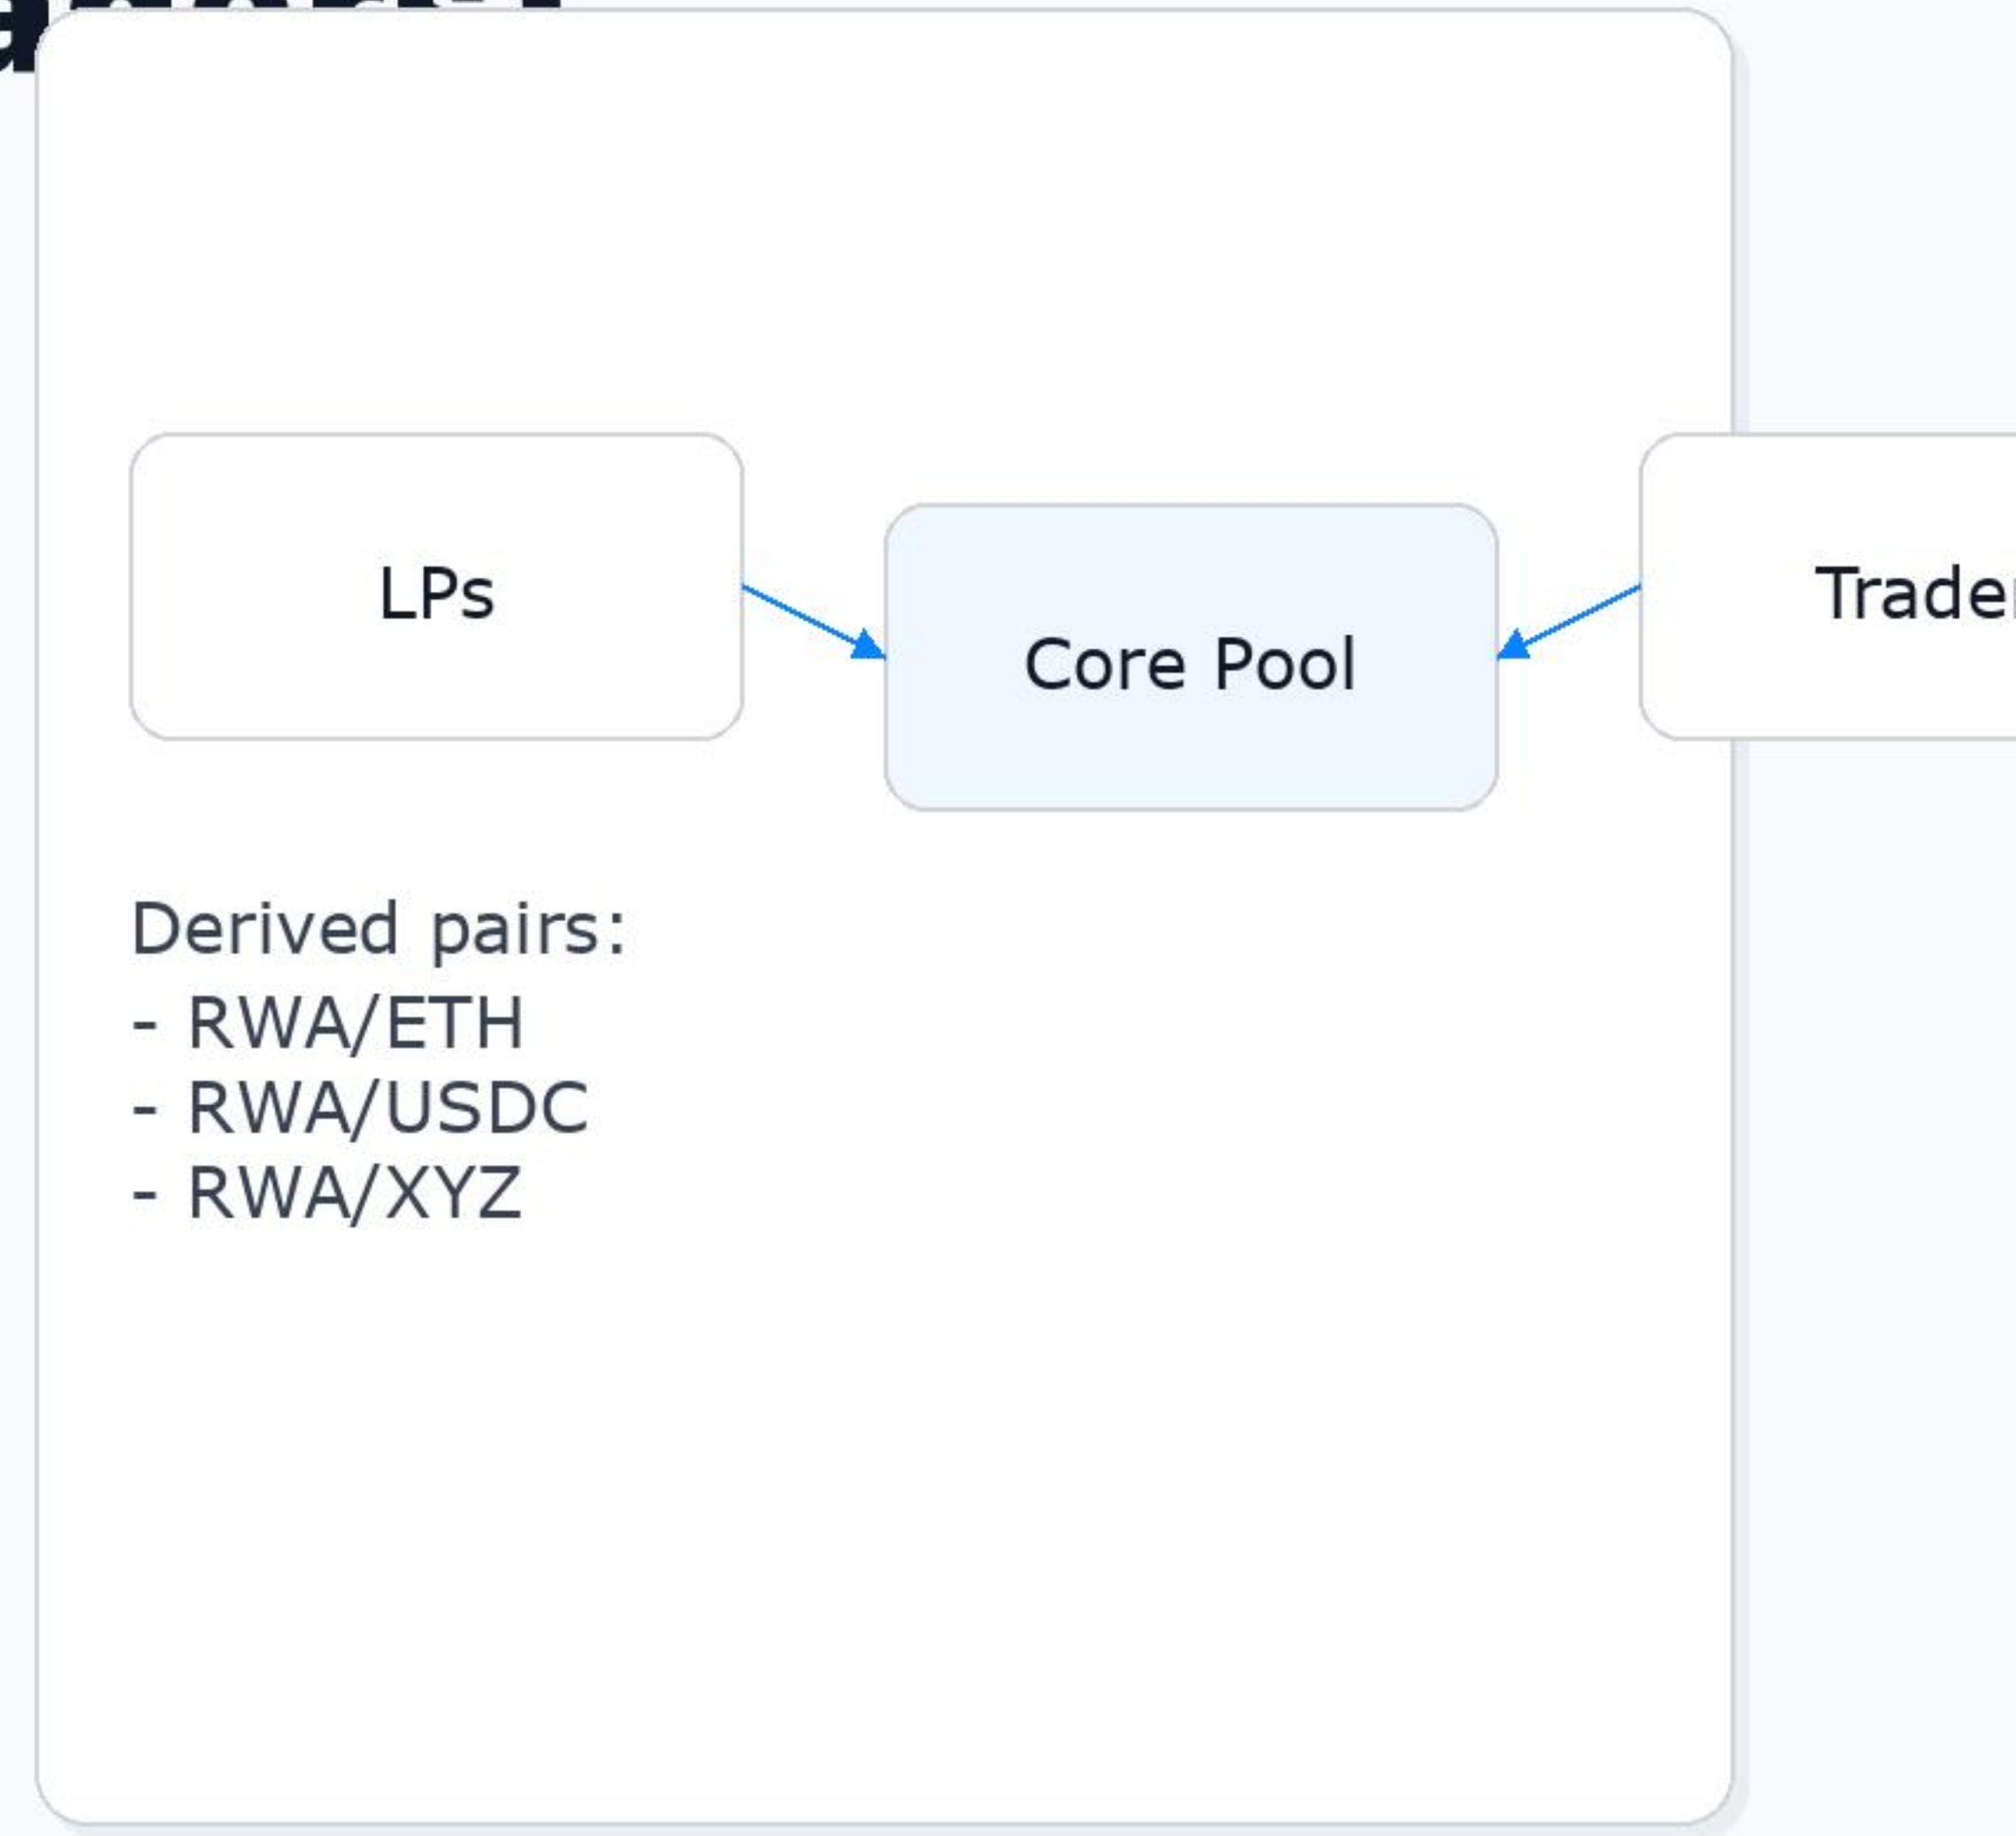

## Pool Settings

maxPriceMoveBps (optional)  default +/- 30% if unset

Initial Liquidity  
☒

# Participation (LPs / Traders)

- LPs add or remove liquidity after init
- Traders access RWA through multiple derived pairs
- Reservation provides a safe waitlist instead of failed trades

# Impact

- Issuers: stable trading environment
- Traders: predictable pricing, fewer failed trades
- DEX: higher RWA volume and TVL

Impact grows across the ecosystem

Issuers

Traders

DEX

# Closing

- We are not creating another RWA pool
- We expand DEX trading with one shared RWA liquidity base

One core base, many routes
